### 5.3.43 Sea bass (Dicentrarchus labrax) in Divisions IVb and c, VIIa, and VIId-h (Central and South North Sea, Irish Sea, English Channel, Bristol Channel, Celtic Sea)

## ICES stock advice

ICES advises that when the MSY approach is applied, total landings (commercial and recreational) in 2016 should be no more than 541 tonnes. ICES cannot quantify the corresponding catches.

ICES advises that a management plan is urgently needed to develop and implement measures to substantially reduce fishing mortality throughout the range of the stock.

## Stock development over time

Strong year classes in 1989 and some subsequent years caused a rapid increase in spawning-stock biomass (SSB). The fishing mortality (F) shows an increasing trend and is well above the Fmsy proxy. Recruitment has been very poor since 2008. SSB has

Figure 5.3.43.1 Sea bass in Divisions IVb and c, VIla, and VIId-h. Summary of stock assessment (weights in thousand tonnes). Landings are from the commercial fishery only. Fishing mortality is shown for the combined commercial and recreational fisheries. Predicted recruitment values are non-shaded.

## Stock and exploitation status

Table 5.3.43.1 Sea bass in Divisions IVb and c, VIIa, and VIId-h. State of the stock and fishery, relative to reference points.

|  | Fishing pressure |  |  |  |  | Stock size |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2012 | 2013 |  | 2014 |  | 2013 | 2014 |  | 2015 |
| Maximum Sustainable Yield | $\mathrm{F}_{\text {MSY }}$ | * | * | * | Above | MSY <br> $\mathrm{B}_{\text {trigger }}$ | $\nabla$ | $\vartheta$ | ( | Below trigger |
| Precautionary approach | $\begin{aligned} & \mathrm{F}_{\mathrm{p} \mathrm{p}}, \\ & \mathrm{~F}_{\mathrm{lim}} \end{aligned}$ | $?$ | ? |  | Undefined | $\mathrm{B}_{\mathrm{pa}}, \mathrm{Bl}_{\text {lim }}$ | $\checkmark$ | ( | 0 | Increased risk |
| Management plan | $\mathrm{F}_{\text {MGT }}$ | - | - | - | Not applicable | SSBMGT | - | - | - | Not applicable |

## Catch options

Table 5.3.43.2 Sea bass in Divisions IVb and c, VIIa, and VIId-h. The basis for the catch options.

| Variable | Value | Source | Notes |
| :---: | ---: | :---: | :--- |
| F ages 5-11 (2015) | 0.38 | ICES (2015a) | F (2014). Commercial fishery F = 0.28; recreational fishery <br> $\mathrm{F}=0.10$. |
| SSB (2016) | 5278 t | ICES (2015a) |  |
| $\mathrm{R}_{\text {ageo }}$ (2013, 2014, and 2015) | 6.12 millions | ICES (2015a) | Geometric mean 1985-2012 |
| Total catch (2015) | unknown |  |  |
| Total landings (2015) | 2698 t | ICES (2015a) | Commercial + recreational |
| Discards (2015) | unknown |  |  |

Table 5.3.43.3 Sea bass in Divisions IVb and c, VIIa, and VIId-h. The catch options. Weights in tonnes. The option of TAC changes are not presented, since there is no TAC for sea bass.

| Rationale | Total landings (2016)* | Basis | F total | $\begin{gathered} \hline \text { SSB } \\ (2017) \end{gathered}$ | $\begin{gathered} \hline \% S S B \\ \text { change** } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MSY approach | 541 | $\mathrm{F}_{\text {MSY }} \times$ SSB $_{2016} / \mathrm{MSY} \mathrm{B}_{\text {trigger }}$ | 0.09 | 5581 | +6\% |
| Zero catch | 0 | $\mathrm{F}=0$ | 0 | 6058 | +15\% |
| Other options | 804 | $\mathrm{F}_{\text {MSY }}=0.13$ | 0.13 | 5351 | +1\% |
|  | 2093 | $\mathrm{F}_{2014}$ | 0.38 | 4232 | -20\% |
|  | 1733 | $0.8 \times \mathrm{F}_{2015}$ | 0.30 | 4543 | -14\% |
|  | 1346 | $0.6 \times \mathrm{F}_{2015}$ | 0.23 | 4879 | -8\% |
|  | 929 | $0.4 \times \mathrm{F}_{2015}$ | 0.15 | 5242 | -1\% |
|  | 482 | $0.2 \times$ F. 2015 | 0.08 | 5634 | +7\% |

* Commercial and recreational landings.

## Basis of the advice

Table 5.3.43.4 Sea bass in Divisions IVb and c, VIIa, and VIId-h. The basis of the advice.

| Advice basis | MSY approach. |
| :--- | :--- |
| Management plan | There is no management plan for sea bass in this area. |

## Quality of the assessment

There are uncertainties in the assessment due to inaccuracies in historical landings, a lack of a time-series of recreational catches, variable fishery sampling rates over time including the absence of length or age compositions for French fleets prior to 2000, and availability of survey data only for the eastern Channel. However the very weak recruitment from 2008 to 2012 is confirmed by the surveys, reduced catches of young fish by the UK and French fisheries, and by the low discard rates in recent years. All the input data to the assessment and additional information (catch per unit effort in the French fishery) shows a declining trend of biomass.

Stock identity remains poorly understood and tagging studies are ongoing. Survival rates of sea bass discarded from commercial vessels or released by anglers are poorly known.

Figure 5.3.43.2 Sea bass in Divisions IVb and c, VIIa, and VIId-h. Historical assessment results (includes assumed long-term average recruitment for 2013 onwards in both assessments).

## Issues relevant for the advice

The ICES advice is for the total landings (commercial and recreational fisheries). ICES has no basis for advising on the allocation of the advised landings to commercial and recreational fisheries.

The emergency measures in 2015 reduced pelagic trawling. The fishing mortality in 2015 is therefore assumed to be similar to the 2014 value (when a large reduction in pelagic trawling occurred due to bad weather).

ICES advises that a management plan for sea bass is needed. The stock is likely to decline further in the short term due to recent low recruitment. A reduction in fishing mortality is needed to prevent biomass falling to a level where productivity is impaired, and to move fisheries towards $\mathrm{F}_{\text {msr. }}$

## Reference points

Table 5.3.43.5 Sea bass in Divisions IVb and c, VIIa, and VIId-h. Reference points, values, and their technical basis.

| Framework | Reference point | Value | Technical basis | Source |
